

CUSTOM SUBSEA BASKETS

DESCRIPTION

Seadraulics design and fabricate multipurpose, lightweight and high load capacity ROV Baskets.

Baskets are designed and tailored to suit client requirements and can be DNV 2.7.3 rated if required. If required 3D modelling and designs can be supplied.

Standard Rental baskets are designed for ease of operation Subsea and are practical for basic operations. Sales units custom, designed to client requirements.

From simple basic design to high lift, high capacity designs.

All designs are focused on ensuring uncluttered operations for the ROV and maintaining, where possible, the single lift principal. Ensuring easy, safe and quick ROV operations.

FEATURES

- GRP grating and stainless steel fittings for easy maintenance
- GRP grating allows seawater easy passage through bottom and sides
- GRP grating prevents seabed suction effects
- Basket compartments can be provided with/without hinged lids with ROV locking mechanism
- Designed for easy subsea handling and surface transportation
- Lifting arrangement dependant on required SWL, but focus on single lift point
- For easy crane disconnection and re-connection
- Flying Lead Deployment baskets can be provided
