Subsea Fluid Mechanics

SUBSEA CONNECTORS

Seadraulics offers various types of high-pressure, underwater connectors and interconnect cable assemblies. Our products are designed for a wide range of electrical and fiber optic applications, ensuring reliable and efficient connectivity solutions under challenging underwater conditions.

PRODUCTS

Subconn	Subconn connectors are known for their robustness and reliability in underwater environments. They are designed to withstand high pressure and are ideal for various underwater applications.
Burton	Our Burton connectors are designed for high-pressure underwater environments. They provide reliable and efficient connectivity solutions for electrical and fiber optic applications.
Bulk Head Micro Circular	The Bulk Head Micro Circular connectors are compact and designed for space-constrained underwater applications. Despite their small size, they offer high performance and reliability.
Bulk Head Connectors	Our Bulk Head Connectors are designed to provide secure and reliable connections in high-pressure underwater environments. They are robust and ensure optimal performance.
Dummy Plugs	Seadraulics' Dummy Plugs are used to protect the connectors when they are not in use. They prevent damage and ensure the longevity of the connectors.
Locking Sleeves	Our Locking Sleeves ensure a secure connection by preventing accidental disconnections in dynamic underwater environments.

For more detailed specifications and information about each product, please contact our sales team or visit our website.
